

Twin-response transitions across framing conditions

Movement legitimacy — twin-response transition matrix

Behavioral intent — attendance transition (2x2)

Same respondent answers both conditions. Left: 5x5 legitimacy transition — rows = Threat (Security) response, columns = Opportunity (Peace) response. Diagonal boxed; above-diagonal cells indicate Peace-higher shifts. Right: 2x2 behavioral-intent flow — cell area $\propto$ respondent count. "Only threat" cell (=0) marked with a dashed outline. Protocol: C6 · GPT-5.4-mini (verbalized sampling, T=0.8) / GPT-4o-mini (direct, T=0.8). No political-context prepend (exp13, noPC).
Above diagonal (Peace > Security): 1,144 Diagonal (unchanged): 824 Below diagonal (Peace < Security): 647
